

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 1: Elementary / Pre-Intermediate

1 Warmer

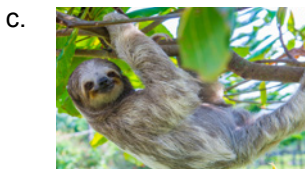

a. Match the animals with the pictures.

1. sloth yalqov

2. possum opposum

3. civet clivet

4. alligator

2 Key words

a. Fill the gaps in the sentences using these key words from the text.

collision to'qnashuv

colony toda gala

endangered yoqolib ketishi
xafida bolgan

install ornatmoq

reduction
kamaytirish

- A _____ is a decrease in the amount or number of something.
- A _____ is an accident in which a vehicle crashes into something.
- If an animal is _____, there are very few left and they may soon completely disappear for ever.
yoqolmoq
- When people _____ something, they put it in the correct place and make it ready for use.
- A _____ is a group of animals of the same type that live in the same place.

deadly
Oldiradigan

environmentalist
atrof muhitni himoya qiluvchi

survive

threatened
taxtid soladigan

underpass
ko'cha yer osti yo'li

- An _____ is someone who wants to protect the environment.
- An _____ is a path that goes under a road.
- A _____ person or animal is in danger.
- If something is _____, it can kill you.
- To _____ means to stay alive.

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 1: Elementary / Pre-Intermediate

Patrick Greenfield

29 December, 2021

- 1 Wildlife bridges are becoming popular. There is now a railway bridge for dormice in the UK and new animal crossings for deer and bears in Colorado.
- 2 "Ten years ago, we didn't know if wildlife bridges would work or not. Now we know they cause huge reductions in collisions – in some cases, 85% to 99% reductions," says Rob Ament, a road ecology expert.
- 3 There are wildlife bridges on every continent: there is an elephant underpass near Mount Kenya; the Netherlands has bridges for wolves; they use hanging water pipes in Java; and a bridge may help bison cross the Mississippi.

Here are five projects from around the world helping animals.

Alligator Alley, Florida

- 4 The Everglades is an enormous wetland that is home to thousands of alligators, deer and the endangered Florida panther. The highway that crosses the Everglades was famous for high-speed collisions with wildlife until Florida installed crossings. Today, dozens of underpasses and fencing help wildlife cross the road.

'The tunnel of love' on the Great Alpine Road, Australia

- 5 In south-east Australia, the Great Alpine Road was a danger to a colony of endangered mountain pygmy possums. Even though there are only about 150 in the colony, the road separated them into two groups. Conservationists decided to build a "tunnel of love" between the groups to improve their chances of survival. The tiny animals can cross the nearly 15-metre tunnel in just 15 seconds.

India's tiger corridor

- 6 Environmentalists fought hard to get India's first wildlife underpasses. Collisions with big cats still happen, but environmentalists say the underpasses show the need for more wildlife crossings on India's road network. At least 18 species use the crossings, including tigers, wild dogs, sloth bears, civets and leopards. Around 55,000km of roads pass through India's forests and protected areas.

Bhutan's elephant crossing

- 7 Bhutan is a small country in the Himalayan mountains between China and India. Nearly 700 Asian elephants live in Bhutan's forests. On the 183km east-west motorway, Bhutan constructed elephant underpasses to help the threatened animals move safely through the landscape.

Sloth bridges in Costa Rica

- 8 Wildlife passes are not always bridges or underpasses. In Costa Rica, they use rope bridges high in the trees to help sloths, monkeys and other wildlife cross roads to avoid collisions, dog attacks and electrocutions on power lines. Crossing roads is often deadly for sloths because they move so slowly but the rope bridges help them to survive.

First published in *The Guardian*, 29/12/21

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 1: Elementary / Pre-Intermediate

3 Comprehension check

a. Answer the questions using information from the article.

1. Which country has bridges for wolves?
2. What is the Everglades?
3. Where is the Great Alpine Road?
4. How many mountain ^{kichikroq bolgan}pygmy possums are in the colony?
5. How long is their “tunnel of love”?
6. How many species use the crossings in India?
7. What is the total length of the roads that pass through forests and protected areas in India?
8. Where is Bhutan?
9. How many elephants live in Bhutan?
10. Why is crossing roads so deadly for sloths?

4 Key language

a. Match the words in the left-hand column with the words in the right-hand column to make expressions from the text.

- | | |
|---------------|--------------|
| 1. endangered | a. collision |
| 2. road | b. bridge |
| 3. high-speed | c. animals |
| 4. wildlife | d. pipe |
| 5. rope | e. crossing |
| 6. water | f. network |

5 Discussion

a. Discuss this question.

- Governments should spend much more money on protecting animals.

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 1: Elementary / Pre-Intermediate

6 In your own words

a. Choose either Bhutan or Costa Rica and use the internet to find more information about your chosen country. Answer these questions:

- Where is it?
- What is the population?
- What is the capital city?
- What are the main industries?
- What language or languages do the people speak there?
- What are the main features of its geography?

b. Report your findings to the class.

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level: Elementary / Pre-Intermediate – Teacher's notes

Article summary: The article describes the introduction of various types of animal crossings in different parts of the world to help animals survive road crossings and other dangers.

Time: 60 minutes

Skills: Reading, Speaking, Writing

Language focus: Vocabulary

Materials needed: One copy of the worksheet per student

1. Warmer

- a. A large number of words for different animals are used in the text. Students match the words to the pictures.

Key:

1. c
2. b
3. d
4. a

Note: the word *ecoduct* in the headline is a general term for animal crossings, encompassing bridges, underpasses, tunnels, etc.

2. Key words

- a. Ask students to do the exercise individually and then compare their answers in pairs or small groups. It can be useful for students to know related words to some of these items, e.g., *collision* – *to collide*, *to survive* – *survival*, *to install* – *installation*. Note that *install* is often used with equipment, e.g., 'to install a new computer system', and with household utilities, e.g., 'They installed a new bathroom'.

Key:

- | | |
|----------------------|----------------------------|
| 1. <i>reduction</i> | 6. <i>environmentalist</i> |
| 2. <i>collision</i> | 7. <i>underpass</i> |
| 3. <i>endangered</i> | 8. <i>threatened</i> |
| 4. <i>install</i> | 9. <i>deadly</i> |
| 5. <i>colony</i> | 10. <i>survive</i> |

3. Comprehension check

- a. Point out that the information needed for the answers is in the order in which it appears in the text. The answers given are suggested answers. Students may answer correctly using different words, e.g., they may simply say 'Australia' for item 3.

Key:

1. *the Netherlands*
2. *It is a large area of wetland in Florida.*
3. *in south-east Australia*
4. *about 150*
5. *almost 15 metres*
6. *at least 18*
7. *55,000km*
8. *between China and India*
9. *nearly 700*
10. *because they move so slowly*

4. Using key language

- a. Encourage students to look back in the text to check their answers. Note that *road* and *wildlife* can also be used with 'bridge' but the solution given is the only one where all the answers can be used.

Key:

- | | |
|------|------|
| 1. c | 4. e |
| 2. f | 5. b |
| 3. a | 6. d |

5. Discussion

- a. Allow students time to note down their ideas and encourage them to say why they have chosen each particular quality.

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level: Elementary / Pre-Intermediate – Teacher's notes

6. In your own words

- a. The prompts given are simply guidelines. Students may omit some of these and include other information they have found. This activity could also be done as a homework activity.

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 2: Intermediate

1 Warmer

a. Match the animals with the pictures.

1. sloth

a.

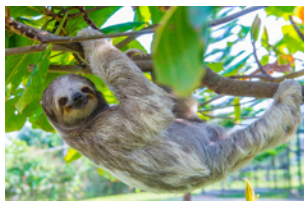

b.

2. possum

c.

d.

3. civet

4. alligator

2 Key words

a. Find the following words in the text. The paragraph numbers are given to help you.

1. an adjective meaning *using new ideas that are not yet proven to be successful every time*
_____ (paragraph 2)

2. a noun meaning *an accident in which a vehicle that is moving crashes into something*
_____ (paragraph 2)

3. a noun meaning *a path that goes under a road* _____ (paragraph 3)

4. a verb meaning *divide something into two equal halves* _____ (paragraph 4)

5. an adjective meaning *famous for something bad* _____ (paragraph 4)

6. a verb meaning *find and follow a path through a difficult place* _____
(paragraph 4)

7. a noun meaning *a group of animals of the same type that live in the same area*
_____ (paragraph 5)

8. an adjective meaning *capable of being operated from a distance* _____
(paragraph 5)

9. a two-word adjective meaning *involving a lot of effort, especially against a very determined opponent* _____ (paragraph 6)

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 2: Intermediate

10. a noun meaning *a mass of leaves and branches that form a cover high above the ground in a forest* _____ (paragraph 8)
11. an adjective meaning *not attractive or graceful* _____ (paragraph 8)

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 2: Intermediate

Patrick Greenfield

29 December, 2021

- 1 From a tiny railway bridge for dormice in the UK to new animal crossings for deer and bears in Colorado, wildlife bridges are becoming popular.
- 2 “Ten years ago, wildlife bridges were experimental. We didn’t know whether they would work or not. Now they’ve shown they cause huge reductions in collisions – in some cases, 85% to 99% reductions,” says Rob Ament, a road ecology expert. “You can design them for many species.”
- 3 Wildlife bridges are found on every continent: there is an elephant underpass near Mount Kenya; the Netherlands has a network of bridges for wolves; suspended water pipes are used in Java; and a bison bridge may help the animals cross the Mississippi.

Here are five projects from around the world helping animals make their way.

Alligator Alley, Florida

- 4 A 129km stretch of road bisects the Everglades, an enormous wetland that is home to thousands of alligators, deer and the endangered Florida panther. It used to be notorious for high-speed collisions with wildlife until the crossings were installed. Today, dozens of underpasses and fencing help wildlife navigate the road. “Fencing is critical along Alligator Alley. It keeps the wildlife off the roadway and on the crossing,” says Brent Setchell, a design engineer at Florida Department of Transportation.

‘The tunnel of love’ on the Great Alpine Road, Australia

- 5 In south-east Australia, the Great Alpine Road was a threat to a colony of critically endangered mountain pygmy possums. Even though there are only about 150 in the colony, testing revealed genetic differences between sub-groups separated by the road. They are also threatened by fire, disappearing food sources and other species. Conservationists decided to build a “tunnel of love” between the isolated groups to improve mixing and strengthen their chances of survival. The tiny marsupials can cross the nearly 15-metre

tunnel in just 15 seconds – sometimes too fast for remote sensing cameras to capture them.

India’s tiger corridor

- 6 India’s first wildlife underpasses were a hard-fought victory for environmental campaigners. Collisions with big cats still happen, but environmentalists say the underpasses have highlighted the need for more wildlife crossings on India’s road network. At least 18 species use the crossings, including tigers, wild dogs, sloth bears, civets and leopards. “According to our calculations, 55,000km of roads pass through India’s forests and protected areas, many of them through wildlife corridors,” Milind Pariwakam, of the Wildlife Conservation Trust, said.

Bhutan’s elephant crossing

- 7 Nearly 700 Asian elephants live in Bhutan’s forest on the eastern edge of the Himalayas. The small Buddhist country lies between China and India and is known for its dramatic landscapes and environmental leadership, as one of the few carbon-negative countries in the world. On the 183km east–west motorway, Bhutan’s first elephant underpasses were constructed to help the threatened animals move through the landscape.

Sloth bridges in Costa Rica

- 8 Wildlife passes are not always bridges or underpasses. In Costa Rica, canopy bridges are used to help sloths, monkeys and other wildlife cross roads to avoid collisions, dog attacks and electrocutions on power lines. The rope bridges are installed in areas where rainforest has been interrupted by human development. Crossing roads is often deadly for the slow-moving creatures. “People look at them and think that they’re so poorly equipped to survive because you see them crossing roads and trying to move around and they look so awkward and useless,” Rebecca Cliffe, head of the Sloth Conservation Foundation, said earlier in 2021. “But if you put them in a well-connected rainforest, then they are masters of survival.”

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 2: Intermediate

3 Comprehension check

a. Are these statements True (T) or False (F) according to the article? Correct any that are false.

1. Ten years ago, people didn't know if animal bridges would work.
2. Now we know that they have greatly reduced the number of collisions.
3. There are no fences on roads in the Everglades.
4. Fire is a danger for pygmy possums in Australia.
5. The Great Alpine Road is in India.
6. It was easy for environmentalists to get wildlife underpasses in India.
7. Bhutan has borders with India and China.
8. Bhutan is on the western edge of the Himalayas.
9. Bhutan is a very environmentally-friendly place.
10. Sloths are graceful, fast-moving animals.

4 Key language

a. Mark the main stressed syllable in these words from the text.

1. popular
2. experimental
3. collision
4. alligator
5. endangered
6. environmentalist
7. electrocution
8. campaigner

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 2: Intermediate

5 Discussion

a. Discuss these statements.

- “Animal bridges will benefit humans as much as animals.”
- “Governments need to spend more money to protect endangered species.”

6 In your own words

a. Use the Internet to find information about a critically endangered animal species. Prepare a short report about the species. Include:

- where it is normally found
- how many are left in the wild
- what factors are threatening its existence
- and what are the prospects for its survival.

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 2: Intermediate – Teacher's notes

Article summary: The article describes the introduction of various types of animal crossings in different parts of the world to help animals survive road crossings and other dangers.

Time: 60 minutes

Skills: Reading, Speaking, Writing

Language focus: Vocabulary

Materials needed: One copy of the worksheet per student

1. Warmer

- a. A large number of words for different animals are used in the text. Students match the words to the pictures.

Key:

1. c
2. b
3. d
4. a

Note: the word *ecoduct* in the headline is a general term for animal crossings, encompassing bridges, underpasses, tunnels, etc.

2. Key words

- a. Ask students to do the exercise individually and then compare their answers in pairs or small groups. Note that *notorious* can only be used in a negative sense, e.g., 'a notorious dictator', 'a notorious criminal'. The adjective *hard-fought* often collocates with 'victory' and is frequently used in a sporting context, e.g., 'Dortmund's hard-fought victory in Munich'.

Key:

- | | |
|------------------------|-----------------------|
| 1. <i>experimental</i> | 7. <i>colony</i> |
| 2. <i>collision</i> | 8. <i>remote</i> |
| 3. <i>underpass</i> | 9. <i>hard-fought</i> |
| 4. <i>bisect</i> | 10. <i>canopy</i> |
| 5. <i>notorious</i> | 11. <i>awkward</i> |
| 6. <i>navigate</i> | |

3. Comprehension check

- a. The answers given are only suggested answers and students may correctly answer the questions in different ways, e.g., in item 7, they may say 'It is located on the eastern edge of the Himalayas'.

Key:

1. *True*
2. *True*
3. *False. They help wildlife navigate the road.*
4. *True*
5. *False. It is in Australia.*
6. *False. It was a hard-fought victory.*
7. *True*
8. *False. It is on the eastern edge of the Himalayas.*
9. *True*
10. *False. They are slow-moving and can be awkward.*

4. Key language

- a. Students could be asked to do this exercise individually and then compare their answers in pairs.

Key:

- | | |
|--------------------------|------------------------------|
| 1. <u>p</u> opular | 6. environ <u>m</u> entalist |
| 2. exper <u>i</u> mental | 7. electro <u>c</u> ution |
| 3. coll <u>i</u> sion | 8. camp <u>a</u> igner |
| 4. <u>a</u> lligator | |
| 5. end <u>a</u> ngered | |

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 2: Intermediate – Teacher's notes

5. Discussion

- a. Allow students time to note down their ideas about each statement and encourage them to say why they agree or disagree with each one.

6. In your own words

- a. Students should enter 'most critically endangered species' into a web browser. There are numerous websites that describe the most threatened animal species. Students should find the information specified in the instructions and prepare a short report for the class. This would best be done as a homework task.

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

10. _____ is the process of producing young animals from parents who are close members of the same family.

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 3: Advanced

India's tiger corridor and Australia's possum 'tunnel of love' are among the myriad infrastructure projects providing safe passage

Patrick Greenfield

29 December, 2021

- 1 From a tiny railway bridge for dormice in the UK to elk, deer and bears benefitting from new animal crossings in Colorado, wildlife bridges are having a moment. As the human footprint on the planet continues to expand, a growing number of roads and railways include provisions for wildlife to pass through fragmented landscapes.
- 2 "Ten years ago, wildlife bridges were experimental. We didn't know whether they would work or not. Now they've shown they get huge reductions in collisions – in some cases, 85% to 99% reductions," says Rob Ament, a road ecology expert at Montana State University. "You can design them for many species. Even out in the plains, we're getting moose crossings in North Dakota."
- 3 Wildlife bridges are found on every continent: there is an elephant underpass near Mount Kenya; the Netherlands has a network of ecoducts that may help the country's first wolf pack in more than 140 years gain a foothold across the densely populated country; suspended water pipes are helping Java's endangered lorises; and a bison bridge may help the animals cross the Mississippi.

Here are five projects from around the world helping animals make their way.

Alligator Alley, Florida

- 4 The 129km stretch of road between Naples and Fort Lauderdale bisects the Everglades, an enormous wetland that is home to thousands of alligators, deer and the endangered Florida panther. It used to be notorious for high-speed collisions with wildlife until the road was upgraded to a four-lane motorway and crossings were installed. Today, dozens of

underpasses and fencing help wildlife navigate the road. A camera trapping exercise found panthers, black bears, skunks, deer, bats, birds and even fish use the crossings, and hope is growing the state's wildlife bridge network could be extended north to connect potential habitats for the Florida panther. "Fencing is critical along Alligator Alley. It keeps the wildlife off the roadway and on the crossing," says Brent Setchell, a design engineer at Florida Department of Transportation.

'The tunnel of love' on the Great Alpine Road, Australia

- 5 Stretching through the Victorian Alps in south-east Australia, the Great Alpine Road posed an existential threat to a colony of critically endangered mountain pygmy possums. Even though there are only about 150 in the colony, testing revealed genetic differences between sub-groups separated by the road, which are also threatened by fire, disappearing food sources and invasive species. Conservationists decided to build a "tunnel of love" between the isolated groups to improve mixing and strengthen their chances of survival. The tiny marsupials can cross the nearly 15-metre tunnel in just 15 seconds – sometimes too fast for remote sensing cameras to capture them.

India's tiger corridor

- 6 India's first dedicated wildlife underpasses were a hard-fought victory for environmental campaigners. Collisions with big cats still happen, but environmentalists say the underpasses have highlighted the need for more wildlife crossings on India's road network. A 2019 camera trapping exercise found at least 18 species use the crossings, including tigers, wild dogs, sloth bears, civets and leopards. "According to our calculations, some 55,000km of roads pass through India's forests and protected areas, many of them through wildlife corridors," Milind Pariwakam, a road ecologist with Wildlife Conservation Trust Mumbai, said. More infrastructure projects now have wildlife passes, including the 1,380km Delhi-Mumbai expressway currently under construction, which includes India's first animal bridges.

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 3: Advanced

Bhutan's elephant crossing

- 7 Nearly 700 Asian elephants roam Bhutan's forest on the eastern edge of the Himalayas. The small Buddhist country sandwiched between China and India is known for its dramatic landscapes and environmental leadership, as one of the few carbon-negative countries in the world. On the 183km east-west motorway, Bhutan's first elephant underpasses were constructed to help the threatened animals move through the landscape. Monitoring from 2015 to 2017 found that 70 groups of elephants were recorded near the passes, with three-quarters passing through the structures.

Sloth bridges in Costa Rica

- 8 Wildlife passes are not always bridges or underpasses. In Costa Rica, canopy bridges are used to help sloths, monkeys and other wildlife cross roads to avoid collisions, dog attacks and electrocutions on power lines. The rope bridges, which cost about \$200, are installed by the Sloth Conservation Foundation in areas where rainforest has been interrupted by human development on the country's Caribbean coast. Crossing roads is often deadly for the slow-moving creatures and the canopy bridges also help prevent inbreeding. "People look at them and think that they're so poorly equipped to survive because you see them crossing roads and trying to move around and they look so awkward and useless," Rebecca Cliffe, head of the Sloth Conservation Foundation, told Bloomberg earlier in 2021. "But if you put them in a well-connected rainforest, then they are masters of survival."

First published in *The Guardian*, 29/12/2021

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 3: Advanced

3 Comprehension check

a. Answer the questions using information from the article.

1. What has been the effect of wildlife bridges on the number of animal collisions in the USA?
2. Where is the underpass for elephants?
3. When were wolves last found in the Netherlands?
4. What are the Everglades and where are they?
5. What is the role of fencing?
6. Apart from collisions, what additional three problems threaten pygmy possums in Australia?
7. How long does it take the pygmy possums to cross the 15-metre tunnel?
8. What is the total length of the roads that pass through forests and protected areas in India?
9. Which two countries border Bhutan?
10. What three hazards do sloths and monkeys face in Costa Rica?

4 Key language

a. Match the words in the left-hand column with those in the right-hand column to make expressions from the text.

- | | |
|-------------------|---------------|
| 1. high-speed | a. project |
| 2. invasive | b. populated |
| 3. genetic | c. landscape |
| 4. huge | d. equipped |
| 5. densely | e. collision |
| 6. infrastructure | f. species |
| 7. poorly | g. reduction |
| 8. dramatic | h. difference |

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 3: Advanced

5 Discussion

a. Discuss these statements.

- “Governments should spend money on making roads safer for people not animals.”
- “Speed limits should be reduced everywhere to 50km an hour.”
- “Road travel is terrible for the environment.”

6 In your own words

a. Use the internet to find more information about animal crossings. Find out about at least three projects in countries that are not mentioned in the article. Prepare a short report on these projects, which focuses on:

- where they are
- which animals they are designed to protect
- how much they cost
- and how effective they are.

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 3: Advanced – Teacher's notes

Article summary: The article describes the introduction of various types of animal crossings in different parts of the world to help animals survive road crossings and other dangers.

Time: 60 minutes

Skills: Reading, Speaking, Writing

Language focus: Vocabulary

Materials needed: One copy of the worksheet per student

1. Warmer

- a. A large number of words for different animals are used in the text. Students match the words to the pictures.

Key:

1. c
2. b
3. d
4. a

2. Key words

- a. Ask students to do the exercise individually and then compare their answers in pairs or small groups. Point out that *gain a foothold* is an idiomatic term that originates in climbing, where climbers need to find a place for their feet to continue to move upwards. It has the meaning of *establish a promising position*. For example, it has been used recently to refer to variants of Covid, as in 'It is feared that the Omicron variant will rapidly gain a foothold in this area.' The adjective *invasive* is also used in a medical context to refer to procedures that involve opening up the body – 'invasive surgery'. The kangaroo is the best-known example of a *marsupial*.

Key:

- | | |
|----------------------|-----------------------|
| 1. <i>fragmented</i> | 6. <i>invasive</i> |
| 2. <i>foothold</i> | 7. <i>marsupial</i> |
| 3. <i>endangered</i> | 8. <i>roam</i> |
| 4. <i>bisect</i> | 9. <i>canopy</i> |
| 5. <i>collision</i> | 10. <i>inbreeding</i> |

3. Comprehension check

- a. The answers given are only suggested answers and students may correctly answer the questions in different ways, e.g., in item 1, they may say 'They have reduced them significantly' or similar.

Key:

1. *They have reduced them by 85% to 99% in some areas.*
2. *near Mount Kenya*
3. *more than 140 years ago*
4. *They are a large area of wetland in Florida.*
5. *It helps to keep wildlife off the roadway.*
6. *fire, disappearing food sources, and invasive species*
7. *fifteen seconds*
8. *around 55,000km*
9. *China and India*
10. *collisions, dog attacks, and electrocutions*

4. Key language

- a. Students could be asked to do this exercise individually and then compare their answers in pairs. Note that *dramatic* may also be used with *reduction* and *huge* with *project*, but there is only one solution that uses all the words. Ask students to refer back to the text to check their answers.

Key:

- | | |
|------|------|
| 1. e | 5. b |
| 2. f | 6. a |
| 3. h | 7. d |
| 4. g | 8. c |

Animal crossings: the ecoducts helping wildlife navigate busy roads across the world

Level 3: Advanced – Teacher's notes

5. Discussion

- a. Allow students time to note down their ideas about each statement and encourage them to say why they agree or disagree with each one.

6. In your own words

- a. Ask students to open an Internet search engine and enter 'animal crossings'. They should collect information about at least three projects in countries not mentioned in the article, possibly including their own country. This could be done as a homework assignment.

Students could use the information to make a short presentation about animal crossings to the group.
